Eco Friendly

Locally Made

Non Woven

Introducing our non-woven bag! Made from durable and eco-friendly materials, this bag is perfect for your everyday needs. Say goodbye to single-use plastic bags and choose a sustainable option that will last you for years to come.

FINISHING

Ultrasonic

Ultrasonic bonding of non woven fabrics is accomplished by applying high-frequency vibrations to the webs to be welded together

Stitch

Stitch-bonded fabrics are made by mechanically stitching layers of fibres together

Piping

It serves both a functional and decorative purpose, providing a clean finish and adding a pop of colour or contrast to the design. Piping is often used in high-wear areas, such as corners and seams, to provide additional reinforcement.

Laminated PP Woven

Laminated PP Woven fabric is a durable, water-resistant, and strong material made by laminating woven polypropylene (PP) with an additional protective layer such as BOPP film or PE coating. This enhances its moisture resistance, strength, and printability, making it ideal for packaging, reusable shopping bag, and promotional items.

Available colors :

- Black
- White
- Navy Blue
- Royal Blue

What Is rPET ?

rPET stands for recycled polyethylene terephthalate. It's a type of plastic that is commonly used in production of bottles, containers and other packaging materials. PET is a popular type of plastic known for its clarity, strength and recyclability. RPET is simply PET that has been recycled from post-consumer waste or post-industrial waste and processed into new product. This recycling process helps to reduce the amount of plastic waste going into landfills and can contribute to a more sustainable approach to plastic use.

rPET Felt

Is a type of fabric made from recycled plastic bottle (polyethylene terephthalate, or PET). The process involves collecting used plastic bottles, cleaning them, shredding them into flakes, melting them down, and then transforming them into fibres. These fibers are then compressed into dense, soft, and durable felt material.

Did you know what is

Jute Bag ?

Jute material is a natural vegetable fibre which is made from the outer stem and skin of a jute plant. Jute is an incredibly versatile material which also makes up hessian cloth, however it is most commonly used now for making durable items such as eco-friendly jute bags.

**STRONG ENOUGH TO CARRY YOUR GROCERIES,
STYLISH ENOUGH TO CARRY YOUR CONFIDENCE.**

Polycanvas ?

Polycanvas is a durable, versatile fabric made from polyester fibers. It is known for its strength, water resistance and flexibility. Polycanvas is lightweight yet sturdy, making it suitable for products that need to withstand wear and tear. It also has a textured surface that resembles traditional canvas but with the added benefits of synthetic materials, such as being easier to clean and more resistant to fading.

Felt

bag is made from a textile material that is produced by matting, condensing, and pressing fibers together. Felt bags can come in a variety of shapes and sizes, and are often used as a durable and environmentally friendly alternative to traditional leather bags. Felt bags can be found in many different colors and designs, and are often appreciated for their unique texture and appearance.

A **printing method** is a technique used to apply designs, text or images onto various materials. Each method serves different purposes based on the material type, volume and design complexity

PRINTING METHOD

SILKSCREEN

Uses thicker ink and its allow for more solid and vibrant color application, more eye-catching, and more colorful designs that can be seen from even far away.

DTF

Involves printing a design onto a piece of PET film (a special film with a coating that helps transfer designs) using water-based inks and a special powder adhesive. Then, the design on the PET film is heat transferred to fabric using a heat press machine.

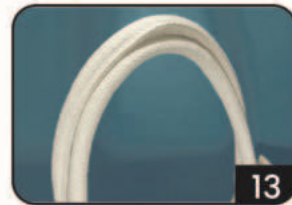

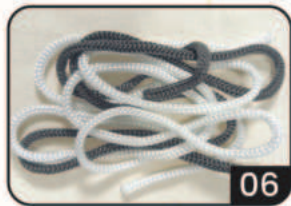

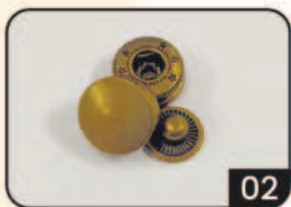

SUBLIMATION

is a unique process that uses high heat and pressure to transfer the design from sublimation paper directly onto the chosen product (material or fabric). The combination of pressure and heat embeds the artwork for long-lasting and vibrant results.

Accessories *are additional items that enhance or complement main product, adding aesthetic or functional value. They provide extra utility or style, allowing users to personalize or improve their experience with the primary product.*
